The problem there lay with the Makita design, however, not this table. The router mounted beautifully to the table and bit replacement and cutting depth was a dream from the top, but the motor base would not stay locked in place in an undermount setup due to Makitas deficient lock lever design. If youre curious about the particulars, please see my review of the Makita RF1101. This was a crying shame IMO, since the Makita is supposed to be a real workhorse, unlike my burned out Craftsman. I have now been using it with the Milwaukee 5616 for the past 3 years and it works satisfactorily. The problem there lay with the Makita design, however, not this table. The table top of this unit is laminated MDF which is not as durable as the metal top of the RA1181, however the plastic legs on the RA1181 are certainly not going to be as durable as the cabinet on this unit. The table top of this unit is laminated MDF which is not as durable as the metal top of the RA1181, however the plastic legs on the RA1181 are certainly not going to be as durable as the cabinet on this unit. I should also point out that while the table is made of MDF, the router plate is made of metal. Since that is where all the action is taking place, I fully expect this unit to last many many years. This unit has 2 dust ports, one behind the router bit and another in the cabinet itself. This really helps keep the dust down. The cabinet also serves as a handy place to store all the little goodies like feather boards, knobs, and whatnot. I have this unit and considered the RA1181 for a little while. I am 100% happy with the cabinet design and would certainly get it again. The only problem I have is that neither table comes with a miter guage. I added the POWERTEC 71005 guage to my table and its awesome. It has a sturdy allmetal design and is a perfect fit for the miter slot in the table. Whichever table you get, I strongly suggest adding a miter guage. The table top of this unit is laminated MDF which is not as durable as the metal top of the RA1181, however the plastic legs

Whichever table you get, I strongly suggest adding a miter gauge I want a router table that mounts on a taller stand, rather than a bench top unit. The resulting height is perfect for me. Stable and I can disassemble into small pieces pretty fast if I need to. I used pronged recessed nuts for the table to plywood bolts and through bolts for the plywood to stand bolts. If you get another kind of lift, you simply get it centered and then drill the hole as your lift requires. I would recommend just using another insert and don't mess with this plate if you have to do this. Two reasons, 1 get a clear plate you can see through, this one is aluminum and there is no seeing through it, and 2 get a plate already with a lift that fits this table and you don't have to mess with any drilling just know the size of plate you need and if it will fit your current or projected router. I don't remember the router motors that will fit the Bosch lift, but it is limited. I do own and use this table but have not upgraded to a lift yet.

As for the vacuum port you would have to tap threads into the bench top to screw it on, or just get creative with a clamp. Clamps are the new bailing wire and duct tape. Hope this helps.
