If the PEAK indicator lights up frequently, turn down the output on the guitar amp. Pedal Operation fig.04 This lights up when set to "MEMORY." This lights up when effects are on. Holding down the button makes the memory number change automatically. When the unit is shipped from the factory, equalization settings are stored in memories 1 through 9. For information about the settings, refer to "Factory Default Settings". Be sure to carry out such operations when the MANUAL indicator is lighted in the "MANUAL" mode. Do not switch off the power while a write operation is in progress. To avoid deleting previously stored settings, check the display before overwriting. fig.11 Again press the LIGHT button and the SELECT button at the same time. "OK". Move the sliders one at a time to make the settings. This lights up when you turn on the power or manipulate the memory section, then goes dark about 20 seconds after you stop operation. The power comes on when a plug is inserted into the INPUT jack, and goes off when it is unplugged. When this operation is carried out, everything that is now in memory is lost. Switch off the power. When running on battery power Disconnect the connection plug from the INPUT jack. Operate the LEVEL slider to adjust the volume p. 8. Is the LEVEL switch on the rear panel. But these new pedals, which include the EQ200 reviewed here, are much more compact and streamlined. The EQ200 itself is a powerful, featurepacked, programmable EQ. There are some overt differences between the new pedal and its elder cousin, the EQ20. But the EQ200's smaller size does little to diminish its impressive soundshaping power. You can also alter the frequency range in the pedals extensive menus to better accommodate bass and drop tunings. While the previous EQ20 had the ability to store up to nine presets, the EQ200 has a limit of four presets. That's enough to cover my core sounds. I suspect that for most players, it will also be an acceptable tradeoff for the EQ200's much smaller footprint. The two footswitches are for bypass and for cycling through the

presets. <http://crownenergy.com/upload/cromptons-luxor-manual.xml>

To save settings, you press and hold the memory button, and use the memory footswitch to scroll to one of the four preset locations. When you reach the desired location, press and hold the memory button again and the corresponding red light will blink to confirm the action. While the changes are smooth and instantaneous, the display screen first shows the name of the memory location M1, M2, etc. before displaying the EQ image. For some players, that might be a plus, but I would prefer an immediate switch to the graphic representation of the EQ profile. Boosting 200k, 400k, and 800k frequencies while dropping 3.2k, 6.4k, and 12.8k gave me smoky, Wes Montgomery style jazz tones from my solidbody that exhibited delicious, edge-of-breakup sound for complex chords and harder picking. Fast single-note passages were noticeably thicker, too. More telling, perhaps, is that when I turned the EQ200 off, my original tone sounded comparatively lifeless. If you've ever wondered how an EQ pedal can transform your tone, little experiments like this reveal a lot about a good EQ's power. But the EQ200 is also handy for calling up sounds I'd use less frequently, for dramatic effect, and for which I might use another pedal entirely. For example, I set up a preset with 800 Hz and 1.6k boosted to get a quasi, cocked-wah sound. I only needed it for one song on a gig, but it was perfect and I didn't require an extra pedal. I filled up the last memory slot with a flat EQ down the middle, so I could adjust as needed, on the fly. It's a useful pedal that gives you the power to sculpt thousands of sounds from ultra-subtle to extreme. And with the potential to boot a few redundant boosts and overdrives from your board, it's a great tool for cleaning house, too. This EQ20 Equalizer is the world's first programmable 10-band graphic digital equalizer pedal for electric and bass guitars. This Guitar Effect Pedal has a simple interface and it plays continuously for 12 hours on one set of AA batteries. The preset feature in the Boss EQ20 Equalizer Guitar Effect Pedal lets you switch EQs seamlessly, in the middle of a song. This Guitar Effect Pedal has a LED Display to tell the position of each slider. Reliable Quality Products that Enhance the sound for the Artist looking to dial in Specific Characteristics for their Individual Preferences. This BOSS EQ20 has storable settings that are Great for having Variable Alterations in different banks and are Easy to Access while performing live. Equalization plays a Major Role in almost every Specific Sound chosen by the Artist, and provides Excellent Boost or Cut from preset to preset. This BOSS EQ20 pedal is Definitely a Worthy Addition to a common Pedal Board Array or even a Simpler Direct set up. The Boss EQ20 Equalizer Guitar Effect Pedal is perfect when tone is needed without changing your amp or system settings. I can use this in an open mic setting or stage performance setting. In the Beatles song Revolution I have put into memory the tone I'm looking for in Lennon's part and intro. There are nine programmable presets to play around with. Very easy to use. 10 sliders from 30 to 12.8 kHz help produce clean sound with the right high, mid and low tones. I learned about this pedal from a session lead guitar player. The EQ is powerful and the ability to store presets allows you to reshape your tone very quickly with the push of a button.

1 downside to mention is the fact that the digital circuitry induces a lag in the audio circuitry path. Verisign. Our payment security system encrypts your information during transmission. I have never liked the Nova Modulator because of the switches, very annoying when choosing a preset. When Boss released the MD500 I thought it was too big for my pedalboard. The MD200 on the other hand is very easy to use, perfect size for my pedalboard, the CE1 sound is so pure, flanger is fantastic, as the other sounds.

The preset switch is so easy to work with, I am very happy with it. All the parameters are adjustable with simple knobs that are very sturdy, but this is expected from a pedal that costs more than the GT1. I didnt test the CTL and USB features, I only use the basic modulation effects that complements my pedal perfectly. Overall I am very satisfied with the pedal. Had a MXR phase 90 script and Boss chorus on my pedal board and replaced both with the MD500. AWESOME PEDAL!!! Just scratching the surface with getting my favorite modulation effects setup, and theyre ALL here and more!. Easy to setup and modify parameters, and great that you can have a preset with heavy effect for clean sounds and setup a lighter version for leads as well. Sound quality is great and the software works well. The hardest thing is figuring out how you want to layout all of your created sounds so I made a spreadsheet to document and rate the factory sounds for my taste, then came back and used banks 0 30 for my creations. Love, love, LOVE IT!! Best eq on the market. It also replaced four oedals on my pedalboard. There's a bit of a learning curve, but it's well worth the effort. As usual Chicago Music Exchange offered excellent, speedy delivery! One of the batteries was open, there were fingerprints on the unit, and worst of all, the electronics smell fried. If youve ever burnt up an amp, you know what smell I am talking about. Im going to see if it works tomorrow, but I am unsure if Ill keep it. I bought and paid for a new unit. I didnt order a demo or slightly used unit. I am wary of the incredibly burnt smell coming from the unit. For longterm reliability. Better than Strymon. All of the effects are usable and of pristine sound quality. Even the Univibe mode sounds warm, chewy and 3D. Very impressed. Boss has always made great effects but this unit is into Eventide or Strymon territory for considerably less money. Absolutely top echelon. Sorry, we failed to record your vote.

Please try again It took a quite a few hours to become fluent with the UI, but a week after having the RV, I sold of my delay pedals, bought the DD, and now I have the MD500. I was back and forth on the boss 500 series or Strymon's pedals. I eventually dove in with these after playing them with a buddy who owns both. The customization is limitless. The sound quality is as good as it gets, and the build quality is solid. I lead worship in a church and play in a heavy rock band. There is no sound I cannot achieve. And once you learn the UI, it works the exact same on all three 500 pedals. I can see me tone shaping with these for years and years to come. Sorry, we failed to record your vote. Only noticeable when you stop playing. I then purchased the MXR M109S EQ which is excellent due to its noise reduction circuitry; however, the blue LEDs are way too bright. Also, unlike the BOSS GE7, the MXR doesnt have a level control to bring the volume up when engaged. Thats not really a big deal as you can boost the EQ sliders altogether to bring up the decibels, when you engage it. I finally settled on the BOSS EQ200. One of the things that I really like is that you can visually see the EQ curve. Secondly, it has four memory locations. As far as any hiss.its quieter than the GE7; but, not as quiet as the MXR. Again, this shouldnt be a consideration at all. My Mesa Boogie combo Mark 525 all amps have a bit of hiss when you have the master volume high. I ended up returning the MXR EQ. Ive kept the GE7 for my second amp. This BOSS EQ200 has earned a permanent spot on my pedalboard. I love this pedal, and it sounds stellar. Posted by Brad on Jul 1, 2020 Was this review helpful.

Because repairs can be very expensive in terms of parts and labour costs, manufacturers usually only provide one year limited warranties that generally only cover items that malfunction due to a

manufacturer's defect. With an important purchase such as a musical instrument or piece of studio gear, however, many people want to have the peace of mind in knowing that their investment will be protected should the product no longer be performing at 100%. Product Replacement if your product cannot be fixed or costs too much to fix, we will replace it with the equivalent model for no additional charge. If this is not possible, a full refund will be provided. No Lemon Policy your product will be replaced should the same problem occur multiple times. Loaners Available a loaner product may be given while the product is being repaired. Power Surge Protection your product is covered even if damaged from a power surge. Accessory Coverage any peripheral devices or accessories that come with your product i.e. foot pedal, case are also covered. Commercial Use Coverage music and recording professionals who purchase gear for "heavyuse" commercial purposes will still be covered. Consumables i.e. strings, reeds, woodwind pads, drum sticks, batteries, tubes, cross faders are excluded as they are designed to be replaced. Accidental or cosmetic damage is not covered. Speakers damaged by overpowering are generally not covered. Our coverage does not provide compensation for loss of use. As of June 2018 the Performance Warranty is no longer transferable. The warranty is only valid in Canada. The pricing is as follows NEW products 4% of selling price to double the warranty from 1 year to 2 years. 4% for each additional year. USED products 4% of selling price to increase the warranty from 3 months to 1 year. 4% for each additional year. Pricing for used electronic products is 4% of the original new selling price.

Customers interested in more complete and convenient but not necessarily longer coverage are still able to purchase additional years of the Performance Warranty.
