

I 30

Based on its compact size and its high mobility, the single chamber machine I 30 provides the perfect solution for confined spaces and small to medium packaging capacities. The bag seals food products, industrial or consumer goods and can therefore improve their protection, storage, maturing or the final presentation for the customers.

Thanks to the WEBOMATIC CleanDesign® inspired surface the external cleaning is performed easily and quickly. The internal cleaning is simplified and quickened due to the modified sealing bar, which can be removed and installed within seconds, without the need of tools.

The sealing bar's spring loaded end pieces do not only ensure a perfect sealing result, the lifespan of the sealing wire is enhanced as well.

For easier maintenance and better access to the inner part of the machine, an additional service door ensures quicker access to the heart of the machine. At any time, the I 30 can be upgraded with MAP or soft-air technology.

Technical Data

Design	Stainless steel
Chamber dimensions	460 x 580 x 200 mm (W x D x H)
Machine dimensions	525 x 850 x 850 mm (W x D x H)
Length of sealing bar, longitudinal	1 x 450 mm
Weight	approx. 141 kg
Compressed air	-
Control unit	IGT- <i>standard</i>
Vacuum pump	63 m ³ /h
Electric power	1,7 kW
Options	MAP • soft-air
Gas supply	Post connector with NW 9
